

Structural Equation Modeling Seminar

Location: CIQSS, 3535 Queen-Mary, Suite 420, Montréal

Dates: May 17 to 21, 2010

Financial support for this Data Training School is provided by the Social Sciences and Humanities Research Council of Canada, the Fonds québécois de recherche sur la société et la culture and the universities affiliated to QICSS¹.

Course objectives and content

This intensive, graduate-level, five-day seminar deals with the principles, assumptions, strengths, limitations, and applications of the family of techniques known as structural equation modeling (SEM). Basic SEM techniques, including path analysis, confirmatory factor analysis (CFA), and full “LISREL” (structural-regression) models, will be covered. Some familiarity with basic statistical techniques, such as multiple regression and exploratory factor analysis, is assumed, but higher levels of quantitative knowledge are not required.

Also, the presentation of topics will be conceptually rather than mathematically oriented, and many examples of the application of SEM to different kinds of actual research problems are considered. There will be a strong emphasis on avoiding common kinds of mistakes in the analysis of structural equation models.

Computer tools for SEM will be described, and there will be opportunities for participants to gain hands-on practice with actual SEM analyses on site using primarily the LISREL program, but other SEM computer tools are available at the Centre.

Trainer

This training session will be under the responsibility of Dr. Rex B. Kline², Professor, Department of Psychology, Concordia University.

General course information

The sessions are in English. Morning sessions will be used for theoretical presentations. Some time in the afternoon sessions will be reserved for computer exercises.

Schedule

The seminar is scheduled from **9:30am to 5:30pm**.

Topics and Reading Schedule

Day 1: Background concepts: Data preparation, overview of computer tools, types of models (Chaps. 1-4)

Day 2: Path analytic models: Effects, estimation, testing, EQS example, computer practice (Chaps. 5-6; Sava, 2002)

Day 3: Confirmatory factor analysis: Models, nonnormality, Mplus example, computer practice, (Chap. 7; MacCallum & Austin, 2000)

Day 4: Structural-regression models: Variations, LISREL example, computer practice (Chaps. 8, 12)

Day 5: Multiple group analysis in SEM, avoiding mistakes, (Chap. 13)

Software Programs

Listed below are freely-available versions of some SEM computer programs that can be downloaded over the Internet:

<u>Program</u>	<u>Web address</u>	<u>Limits</u>
Amos 5 student version	http://amosdevelopment.com/download/	8 variables, 54 parameters
LISREL 8.8 student version	http://www.ssicentral.com/lisrel/student.html	15 variables
LISREL 8.8 full version	http://www.ssicentral.com/lisrel/downloads.html	15-day trial
Mplus 5.21 demo version	http://www.statmodel.com/demo.shtml	6 endogenous, 2 exogenous
Mx Graph	http://www.vcu.edu/mx/index.html	None (full version)

Software Resources

Syntax examples (Kline)	http://psychology.concordia.ca/fac/kline/sem/syntax.pdf
LISREL for Windows resources	www.ssicentral.com/lisrel/techdocs/GSWLISREL.pdf
Amos student version tutorial	http://ssc.utexas.edu/consulting/tutorials/stat/amos/

Eligibility

The course is open to graduate students and postdoctoral fellows as well as to professors and practising researchers. Some familiarity with basic statistical techniques, such as multiple regression, is assumed, but higher levels of quantitative knowledge are not required.

A maximum of 15 participants will be selected on the basis of the relevance of the course to their curriculum, research, or teaching.

Registration

The online registration period will run from **March 1 to 26, 2010**. Selection results will be announced during the week of **March 29, 2010**.
